EDUCATION

Western University (University of Western Ontario)

Graduated: Apr 2026

*B.Sc., Honors Specialization in **Computer Science** (Dean's List 2024 – 2026)*

WORK EXPERIENCE

Software Developer - SOTI

Jun 2026 - Present

- Integrated the fraud detection engine with Workday via **OAuth 2.0/SOAP**, reducing expense reconciliation from 12 minutes to 30 seconds per report across 50K+ reports.
- Built two fraud/policy detection engines covering 66+ rules, reducing manual review time by 90% with **zero-dependency deployment** for locked-down environments.
- Ported the validation engine to **C#.NET** with byte-level parity tests and exposed **Python** implementations through MCP servers.
- Built the AI layer on GPT-5 via an internal OpenAI-compatible gateway, generating plain-English reviewer explanations at ~1.3s and pennies per report, with automatic fallback to deterministic templates on **gateway failure**.

Software Developer Intern - Solink

Sep 2025 - May 2026

- Led the migration of 20+ pages from a legacy Vue codebase to React/TypeScript on Vite, porting shared state and UI components and cutting **CI build times from 12 minutes to 4 minutes**.
- Automated the POS-to-analytics data sync by replacing manual exports with a **scheduled Node.js service**, cutting end-to-end processing from 45 minutes to 15 minutes.
- Built backend services for Interlink using **Node.js, PostgreSQL, and Kubernetes** to ingest POS and video event streams, run LLM analysis, and flag theft/shrink anomalies across 5+ sites.
- Built a **Python QA testing framework** that auto-generates test cases from API schema diffs and triages failures via few-shot LLM log classification, catching 80+ defects across 5 production releases.

Software Developer Intern - Loblaw Digital

Sep 2023 - Dec 2023

- Developed a **Node.js validation service** to audit promotional rule configurations, identifying and resolving 230+ misconfigured offers and protecting 10,000+ customer transactions from incorrect discount pricing.
- Built and deployed RESTful backend services and **CI/CD pipelines (Python, Jenkins)** to automate API certification workflows for internal platform teams, reducing turnaround from ~1 day to same-day per request.
- Re-architected e-commerce backend deployments from **AWS EC2 to Lambda** by refactoring services into serverless functions and updating CI/CD pipelines, cutting deployment time from 55 minutes to 15 minutes across grocery fulfillment services.
- Deployed **Python pipelines** to automate Jira requests, reducing review time by 75% and standardizing validation workflows.

Data Engineer Intern - Scotiabank

Jan 2023 - Apr 2023

- Built a Python reconciliation framework validating **Go ETL** outputs against source ledgers across regional divisions, exposing mismatches via a **REST service** and catching 30+ discrepancies before downstream reporting.
- Shipped **12 real-time ETL pipelines** with Splunk and CloudWatch dashboards on job health and data freshness, adopted by 4 business units and cutting failure detection from 4+ hours to under 10 minutes.
- Built **Python** data-quality checks that blocked malformed records before integration, saving 12 hours per week of manual cleanup.

PROJECTS

DeezedAI App | React Native · Expo · TypeScript · Fastify · PostgreSQL · Prisma · Clerk · S3 · OpenAI · Replicate

[Github](#)

- Developed and launched a cross-platform **AI fitness app** that reached **100 monthly active** users in its first month, enabling users to upload physique photos, view aesthetic scores, and AI-powered personalized recommendations

TaintGate | Python 3 · SQLite · Model Context Protocol (MCP) · JSON-RPC 2.0 · W3C Trace Context

[Github](#)

- Built a **fail-closed MCP security layer** that tracks untrusted data across agent memory and blocks prompt-injection exfiltration, passing 96 adversarial tests with zero successful breaches.

SKILLS

Languages & Platform: Python, TypeScript/JavaScript, FastAPI, Async Programming, SQLAlchemy, REST APIs, tRPC

Frontend & Product: React, Next.js, Tailwind CSS, shadcn, TanStack Query, Developer Tools, Live Monitoring

Kubernetes & Cloud: Kubernetes, Helm, GKE, GCS, Cloud Run, Cloud Tasks, Terraform, Ansible, GitOps

AI & GPU Infrastructure: LoRA, QLoRA, RLHF/RLAIF, vLLM, SGLang, TensorRT-LLM, NCCL, Distributed Training, GPU Scheduling

Observability & Systems: Prometheus, Grafana, Loki, OpenTelemetry, DCGM, Linux, Networking, Namespaces, Performance Tuning

Interests: Golf (10 handicap), Chess (1500 Elo), Tennis, Strength Training, Snowboarding

PROGRAMS & CERTIFICATIONS

Stanford Online - XCS224N: Natural Language Processing with Deep Learning

May 2026

Y Combinator Startup School - Participant (San Francisco, California, United States)

Apr 2026

AWS Certified Solutions Architect - Associate

Mar 2026
