EDUCATION

Western University (University of Western Ontario)

Graduated: Apr 2026

*Bachelor of Science (BSc) – Honors Specialization in **Computer Science** (Dean's List 2024-26)*

- **Courses:** Data Structures & Algorithms, Distributed Systems, Probabilistic Gen AI, Compilers, Data Science, Software Design

Stanford Online – *Natural Language Processing with Deep Learning (Course)*

Jun 2026 - Present

EXPERIENCE

Software Developer (AI) - SOTI

Jun 2026 - Present

- **AI Risk Detection Framework:** Building a Finance AI Control Framework in Python that screens Workday API invoices through 20+ configurable detection rules and a hybrid rules-plus-LLM risk scoring engine, ranking exceptions for reviewer triage
- **Synthetic Data Benchmarking:** Built a synthetic transaction pipeline generating 10,000+ labeled invoices across 15+ fraud scenarios to benchmark detection precision and recall before production rollout.

Software Developer Intern (Full Stack) - Solink

Sep 2025 - May 2026

- **Frontend Stack Migration:** Led the migration of 20+ pages from a legacy Vue codebase to React/TypeScript on Vite, porting shared state and UI components and cutting CI build times from 12 to 4 min.
- **Data Sync Automation:** Automated the POS-to-analytics data sync by replacing manual exports with a scheduled Node.js service, cutting end-to-end processing from 45 min to 15 min.
- **LLM Anomaly Detection Platform:** Built backend services for Interlink using Node.js, PostgreSQL, and Kubernetes to ingest POS and video event streams, run LLM analysis, and flag theft/shrink anomalies across 5+ sites.
- **Internal Workflow Automation:** Deployed Python pipelines to automate Jira requests, reducing review time by 75% and standardizing validation workflows across multiple teams.

Software Engineer Intern (Backend) - Riipen (startup)

May 2024 - Aug 2024

- **Serverless Infrastructure Migration:** Re-architected application deployments from AWS EC2 to AWS Lambda by refactoring services into serverless functions and updating CI/CD pipelines, cutting deploy time from 55 min to 15 min.
- **API Certification Automation:** Developed and deployed RESTful backend services and CI/CD pipelines (Python, Jenkins) to automate API certification workflows, reducing turnaround time by ~1 day per request.

Software Developer Intern (Backend/Data) - Loblaw Digital

Sep 2023 - Dec 2023

- **AI-Assisted QA Framework:** Built a Python QA testing framework that auto-generates test cases from API schema diffs and triages failures via few-shot LLM log classification, catching 80+ defects across 5 production releases.
- **Pricing Validation Service:** Developed a Node.js validation service to audit promotional rule configurations, identifying and resolving 230+ misconfigured offers and protecting 10,000+ customer transactions from incorrect discount pricing.

Software Developer Intern (Data) - Scotiabank

Jan 2023 - Apr 2023

- **Real-Time Pipeline Monitoring:** Built 12 real-time ETL pipelines with Splunk and CloudWatch dashboards adopted by 8 business units, cutting time to detect pipeline failures from 4+ hours to under 10 minutes.
- **Data Reconciliation Automation:** Automated reconciliation checks in Python to validate the Go ETL pipeline's output against source ledgers across regional divisions, exposing mismatch results via a RESTful API and flagging 30+ data mismatches.

PROJECTS

DeezedAI App | React Native, Expo, TypeScript, Fastify, PostgreSQL, Prisma, Clerk, S3, OpenAI, Replicate

[Github](#)

- Developed and launched a cross-platform **AI fitness app** that reached **100 monthly active** users in its first month, enabling users to upload physique photos, view aesthetic scores, and AI personalized recommendations.

Microservices App | Go, gRPC, Protocol Buffers, REST, PostgreSQL, Docker, OpenTelemetry, Prometheus, Grafana

[Github](#)

- Validated 1,200 orders/sec with 85 ms p95 latency under k6 load testing, with full tracing and Prometheus/Grafana monitoring across 10 services and GitHub Actions CI.

SKILLS

Languages: Python, TypeScript, Java, Go, SQL, C#

Technologies: AWS (Lambda, EC2, S3), GCP, PostgreSQL, Docker, Kubernetes, Jenkins, WebRTC, OpenAI API, REST APIs, ETL

Frameworks/Libraries: React, Vue, Node.js, Fastify, Django, React Native, Expo, TensorFlow, .NET, Azure

Concepts: TDD, CI/CD, Multithreading, Object-Oriented Programming, Software Development Lifecycle, Agile Workflow, AI/ML
